

# Bluetooth Headphone Transmission

NOW AVAILABLE in FY20 AVRs & Stereo Receivers

## What is it?

Use Bluetooth headphones to listen to audio playing through our latest AVRs and Stereo Receivers. Playback can be performed **simultaneously** on the speakers **and** Bluetooth headphones **or** on the **Bluetooth headphones only** depending on the needs.

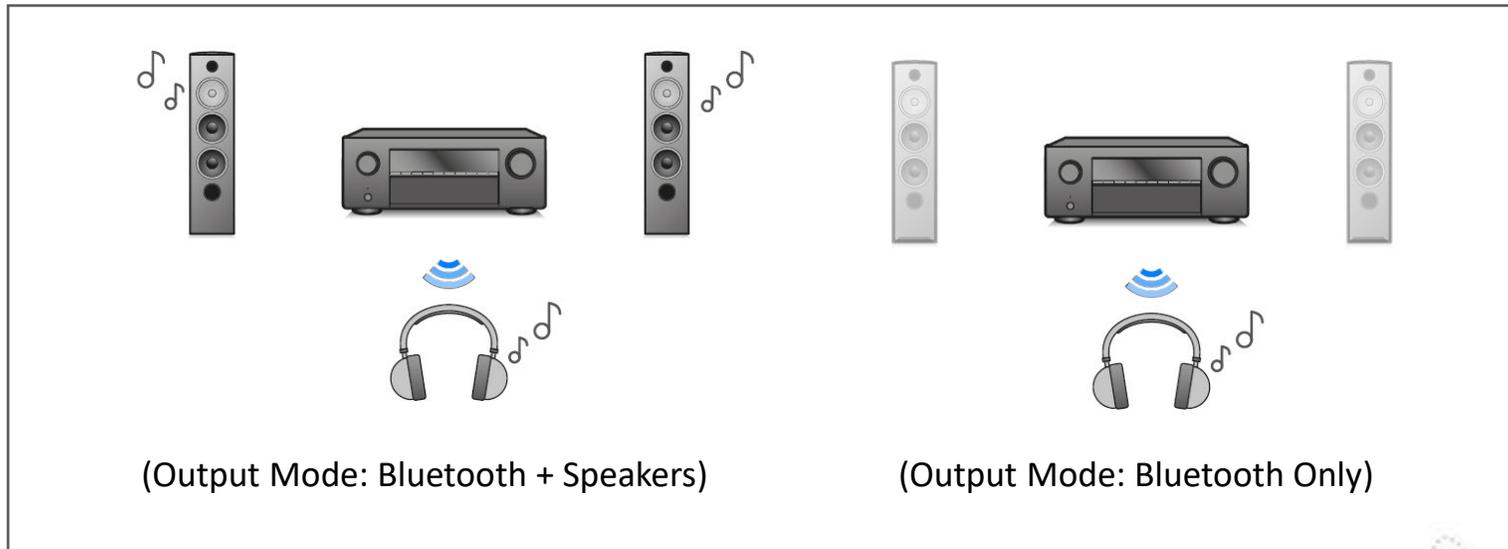

## Use Cases

Bluetooth Headphones only:

- Listen without disturbing others
- Enjoy wireless Headphone listening

Bluetooth Headphones + Speakers:

- Enjoy movie with whole family including people with hearing problem

# Bluetooth Headphone Transmission

## FAQ

### Works with all sources

No matter the soundmode and speaker configuration, Bluetooth Headphones will play a 2ch downmix, without impact to the main room!

### Supporting Products:

**Marantz:** NR1200, NR1510, NR1710, SR5014, SR6014 (no PM7000N, no Melody X / Melody or else)

### How to enable:

Set “Transmitter” to “On” from the “General” - “Bluetooth Transmitter” setting in the AVR menu. Select “Output Mode” for either “Bluetooth + Speakers (Default)” or “Bluetooth Only”.

### Volume Setting:

Headphone Volume is independent to the Main Zone volume and can be set by volume buttons on the headphone.

### Benefits over competitors :

- Yamaha can only do simultaneous playback
- Sony only can do Single use – main room will be off while listening through Bluetooth Headphones
